Computer Science Club

Learn to Build a Website

With HTML: HyperText Markup Language allows you to specify text content and construct an internal webpage structure (semantics)

CSS: Cascading Style Sheets enable advanced formatting techniques such as text gradients and control webpage layout (appearance)

JS: Javascript allows user interaction with the webpage including functionality such as animations and interactive applications (behavior)

What Can I Make a Website About?

Show off your art or music talents
Write a blog about your daily adventures
Your favorite videos and pictures all in one place
Publish how-to guides for video games
Make a fashion blog to show off your newest styles
Pick a subject you like and amaze the world
… and **many others**, come to club to learn how and compete in the year-end website contest for awesome prizes!

Visit www.skc.name/CSClub for the club application and more information
